Indexed in Current Contents

Subiecta

Alkali metals, diatomic molecules and molecular ions containing ~ 199
Aromatic rings 33

Barium azide 87
Bonded functions 283
Bromine, optimized Gaussian basis for ~ 75

Carbonium ions 175
CH_2, triplet-singlet splitting in ~ 17
Charge-transfer interactions in molecular compounds 271
CI method, special large scale 17
Configuration interaction 283
Crystal field splitting 87
Cyclohexene 313

Density localization 253
Diels-Alder reaction 313
Differential overlap 297
Dimethylphosphate 47
1,2-Dioxetane, decomposition of ~ 113
Direct energy minimization 245

Electrophilic aromatic substitution 343
Electrostatic energies 323
Energy surfaces in the complex plane 189
Ethylene 231

Fluorine bonded adducts 343
Friedel-Crafts catalysts 343
Frost-model wave functions 221

Glyoxal, cis-trans isomerization of ~ 81
Green's functions 143

HBr 75
HF^- 189
Hybrid atomic orbitals 297
Hydration 93
Hydrogen atom clusters, correlation energy of ~ 287

Ice-I_h lattice 61
Integrals, molecular 143
Invariance principle 297

Ion-molecule complexes 323
Ion pairs potential surfaces 303
Ion solvation 323

Ketene dimerization 207
Koopmans' theorem, application of ~ to open shell systems 129

Localized molecular orbitals 33, 253

Marron-Weare variational computation 119
MC SCF perturbation theory 157
Molecular polarization 323
Multiconfiguration self-consistent field 245

NMR-line shape analysis 25
Nucleic acids 47, 93

Open shell systems, Koopmans' theorem in RHF methods for ~ 129
Orbital correspondence in maximum symmetry 1

Packing arrangement in TCNQ-containing π-π^* complexes 271
Partial retention of diatomic differential overlap 33
Permutational isomerism 25
Phosphate group 93
Phosphodiester linkage 71
Phospholipids 47, 93
Point-charge models 221
Polyatomic molecules, correlation energies for ~ 175

Radiationless transitions 263
Refractive indices 221

SCF energy partitioning 323
Semiclassical collision theory 189
Silanes 237
Silicon band structure 237
Solvent effect 303
Spin-orbital interaction 189

Vertical ionization potentials 237

Woodward-Hoffmann rules 1

Instructions to Authors

Manuscripts should be *submitted in duplicate*, typed in double-line spacing on one side of the paper only. Form and contents should be carefully checked to exclude the need for corrections in proof. The author should already mark in the manuscript where figures and tables are to be inserted, as he will receive only *one set of proofs* to correct typographical errors. Authors will be charged for corrections in proof involving changes, additions, or deletions to the original manuscript.

The papers should be preceded by an *English summary* of not more than 100 words. Papers not written in English should have an English translation of the title.

Immediately following the summary, a list of *Key words* (not exceeding five items normally) should be supplied for subject indexing.

Literature references should be numbered and listed at the end of the paper. They should be cited as follows: *journal papers* — names and initials of all authors, journal with abbreviations according to the I.U.P.A.C. list (Chemical Abstracts, Vol. 55, 1961), volume and page number, year in parentheses; *books* — names of authors, full title, edition, place, publisher and year. References should be cited in the text by number.

Figures, graphs, tables and structural formulae should be separated from the text and be numbered. Original drawings and graphs should be made in Indian ink with lines of uniform thickness. Authors should keep in mind that drawings will be reduced to a size not exceeding 12 × 19 cm. In general it should be assumed that the same degree of reduction will apply to all figures in the same paper. Inscriptions should allow for any reduction in scale — a capital letter should be about 1.8 mm in height in the final version. Computer print-outs should be black and evenly printed to allow direct reproduction.

Captions, which should be brief, should be typed separately and attached to the manuscript.

Formulae should be typewritten, special attention being given to the placing of indices and exponents to that they are recognizable as such even though there is no difference in size. Formulae should preferably be written in a "linear" form e. g. $\exp(-\varepsilon/kT)$ instead of $e^{\frac{\varepsilon}{kT}}$). It will help the printer if in doubtful cases the position of indices and exponents is marked thus: $b_{\hat{j}}$, $a^{\check{\nu}}$.

Underlining for special alphabets and typefaces should be done according to the following code:

violet:	numerals to be distinguished from letters (1, *l*; zero, *O*)		
single underlining:	small letter		
double underlining:	capital letter	red:	Greek
brown:	boldface	blue:	Gothic
yellow:	upright	green:	Script

The following are frequently confused:

$\cup, \upsilon, \bigcup, U$; $\circ, o, O, 0$; $\times, x, X, \varkappa$; $\vee, v, \nu$; $\theta, \Theta, \phi, \varphi, \Phi, \varnothing, \emptyset$; ψ, Ψ; $\varepsilon, \in$;

a', a^1; the symbol a and the indefinite article a. Please take care to distinguish them in some way.
